

Systematic search: articles mentioning "Spanish plume"

English-language, peer-reviewed meteorological journal articles published on or before 13 August 2023. Independent searches of Google Scholar, Wiley/Royal Meteorological Society and AMS Journals Online, with the Web of Science access limitation reported explicitly.

Material limitation. Web of Science could not be searched in this environment because the institution has no active subscription and no Clarivate API key was available. No Web of Science count has been invented. Consequently, this report documents 86 verified papers but does not claim a completed or exhaustive four-database search.

Eligibility and screening approach

Included	Excluded
English-language journal articles; peer-reviewed publication status; meteorological or hydrometeorological subject matter; European weather; exact contiguous phrase "Spanish plume" in the title, abstract or article body; publication no later than the cutoff.	Books and chapters; editorials, news, meeting items and other non-peer-reviewed material; non-English texts; nonmeteorological work; studies whose substantive weather region was outside Europe; post-cutoff publications; reference-list-only phrase occurrences.

Deduplication used DOI first, followed by normalized title and year. Publication eligibility used the earliest verifiable online-publication date, or issue date where no online date was available. The later Schultz et al. review and dataset were not consulted to generate candidates.

Search log

Database	Executed or intended query	Recorded result count	Notes
Google Scholar	q="Spanish plume"; as_yhi=2023	20 displayed initially; later 11. Stratified harvest: 33 unique records.	Scholar counts changed between runs. Quoted-phrase year strata were used to reduce pagination/count instability.
Wiley / Royal Meteorological Society	cql.anywhere="Spanish plume" AND (dcterms.isPartOf=14778696 OR dcterms.isPartOf=1477870x OR dcterms.isPartOf=10970088 OR dcterms.isPartOf=14698080)	77	Full-text SRU search across the four RMetS journal ISSNs; publication cutoff applied manually because indexed-date filtering omitted eligible first-online 2023 papers.
AMS Journals Online	q1="Spanish plume"; toDate=2023; access=all; pageSize=100	15	All records screened in publisher full text; no remaining 2023 result was first published after 13 August.
Web of Science Core Collection	TS=("Spanish plume") AND DOP=1900-01-01/2023-08-13	Unavailable	Interface reported no institutional subscription; API required an unavailable key. Topic searching would still require publisher full-text checking.

Google Scholar stratified checks

Additional exact-phrase year strata displayed: through 1998, 6; 1997-1998, 3; 1999-2005, 4; 2006-2010, 1; 2011-2015, 5; 2016-2020, 7; and 2021-2023, 1. These overlapped the principal result pages and were deduplicated to a 33-record Scholar harvest.

Screening flow

Stage	Records	Interpretation
Raw harvest	125	77 Wiley/RMetS + 15 AMS + 33 unique Google Scholar harvest records
Duplicates removed	13	One duplicate Wiley collection record and 12 cross-database duplicate occurrences
Unique records screened	112	Full-text and metadata screening against all eligibility criteria
Excluded	42	Each assigned one mutually exclusive primary exclusion reason
Eligible - accessible requested databases	70	55 represented in Wiley/RMetS, 11 in AMS and 14 in Google Scholar, with overlap
Supplementary additions	16	Independently verified in publisher or repository full text; requested-database attribution remains unresolved pending Web of Science access
Body-confirmed eligible corpus	86	Reported below; not presented as an exhaustive four-database total

Primary exclusion reasons

Reason	Count
Non-peer-reviewed, non-article, book, or nonmeteorological material	27
Phrase only in references, or no article-body occurrence	6
Substantive weather/study region outside Europe	5
Published after 13 August 2023	4
Non-English	0
Total	42

Eligible records from the accessible requested databases

Seventy unique records met every eligibility criterion. Database membership reflects the search exports actually obtained; counts overlap where the same record appeared in multiple databases.

Conservative decisions and limitations

- Morris (1986), "The Spanish plume - testing the forecaster's nerve," was not added because peer-review status for Meteorological Magazine could not be substantiated.
- Elsom and Webb (2017), on lightning deaths in the United Kingdom, was not added because the International Journal of Meteorology describes editorial-board review as conditional rather than universal.
- Spengler, Reeder and Smith (2005) was excluded because the exact phrase appeared only in a cited Morris reference and its substantive application concerned Australia.
- Bednorz et al. (2019) was retained because it is a substantive European synoptic/hydrometeorological study and uses the exact phrase in the discussion body.
- Weather records classified as journal articles were retained because the Royal Meteorological Society describes Weather as a peer-reviewed journal.
- Google Scholar result counts are approximate and changed during the search. The 33-record number is the deduplicated harvest, not a claim that Scholar exposed a stable total result count.
- Completion requires rerunning the recorded Web of Science query in a subscribed session or through a valid Clarivate API key, merging any additional candidates, and repeating full-text screening.
